

# The Moore-Miller Administration's 2026 Session Results

In the face of harmful federal actions, the Moore-Miller Administration worked with the General Assembly to deliver a balanced budget and pass legislation that grows jobs, lowers costs, and protects Marylanders. Our 2026 legislative agenda expands opportunity for all Marylanders — making strategic investments in education and industries of the future and advancing bills to lower energy and housing costs – all without increasing taxes. We're proving that even in challenging times, Maryland can move forward with purpose and deliver real results.

## The DECADE Act of 2026

- This comprehensive economic development bill broadens Maryland's ability to attract, develop, and grow businesses within our state
- The bill makes our state more competitive by modernizing programs and processes to reflect today's rapidly changing economy
- We are removing barriers to investment, supporting proven programs, and aligning economic development tools for maximum impact

## The Maryland Transit & Housing Opportunity Act

- Unlocks underutilized land around high-capacity rail stations for affordable housing and economic growth where people can live, work, and travel
- Expands financial incentives to build affordable housing alongside rail stations

## The Protection from Predatory Pricing Act

- Prevents Marylanders from being charged different prices for groceries based on personal data
- Prohibits grocery stores and third party delivery services from using personal data and automated systems to set individual prices for goods

## The Vax Act

- Protects our people by relying on sound science from independent medical organizations to make official recommendations on immunizations, screenings, and other preventative services
- Prevents political pressure in Washington from reversing decades of standard medical practice

## The Utility RELIEF Act

- Holds big companies accountable, modernizes our grid infrastructure, and lowers energy bills for Maryland families
- Invests in local clean energy projects, that are the fastest and cheapest way to bring more generation quickly and lower energy costs for Maryland families
- Increases transparency and accountability for data center companies in the state and ensures they pay for their fair share of energy costs
- Will keep more money in the pockets of Marylanders

THE OFFICE OF GOVERNOR  
**WES MOORE**
